

## Electric Boom Lift Attachment

Electric Boom Lift Attachments - The most common description applied for electric lift trucks are the type "E" meaning the forklifts meet the lowest requirements for fire and electrical hazards. The trucks which are labeled type E are not suitable for use in hazardous places. Type "ES" lift trucks meet all the requirements of Type "E" trucks and have other equipment so as to stop the emission of sparks and control the surface temperature of lift truck components.

The more specialized forklifts are the type "ES" electric vehicle and these are not usually found in the marketplace. Type "EE" trucks meet all the requirements of the ES and E model and have all electrical motor and spark generating components fully enclosed. The type "EE" model is therefore used wherever hazardous environments have been identified. Type "EX" forklifts are particularly designed for use in surroundings wherever flammable fibers or dust or vapors could be existing. These types of lift trucks are constructed utilizing no spark generating parts along with other protective measures in order to ensure optimum safety in the risky applications they can be called upon for.
