

## Utility Buckets

Utility Bucket - Universal Fit buckets also called "slip-on-the-forks" forklift accessory buckets. These buckets can be utilized with whatever model and make of extendable reach forklift. If your unit is unable to be matched with a quick-tach component, another brand new or second-hand universal fit bucket could be located in its place. Standard universal forklift buckets attach to forks that are up to 6" wide and are 48" long. Bigger fork pockets could be ordered through an account executive upon request.

Because universal fit lift truck buckets slip onto the forks directly, they stay on the machinery and are less at risk to destruction. These buckets are also 50 percent deeper as opposed to the quick-tach bucket models. This extra room makes them perfect for lifting irregular shaped loads like backfilling behind walls, tearing off roof trash, elevating roof gravel, moving large debris piles and broken up concrete.

### Quick-Tach Buckets

Additionally, made as additions intended for extendable-reach forklifts, Quick-Tach buckets, are designed to tolerate the positioning of materials far beyond the standard reach of the loader. A hardened beveled cutting blade on both sides and on the leading edge reinforces stability, resistance to damage and offers supreme durability. Quick-Tach lift truck buckets are augmented by scuff bars along the bottom of the unit that shield it from scrapes.

Quick-Tach lift buckets can in many situations substitute the forks and carriage of a forklift, which may weigh anywhere between one hundred to seven hundred pounds. These buckets when installed can free up more load capacity, enabling it to deal with both larger and heavier things. The Quick-Tach is able to dump stuff more or less 1.5 feet higher due to the shorter depth of its bucket. These buckets are built in a custom fashion in order to meet all the specs of certain makes and models of lift trucks. It is important to check with a construction equipment specialist to be able to find the modified Quick-Tach bucket solution for your requirements.

Lift truck bucket attachments are superb for ground level work on construction job sites. They are usually used for transporting snow in northern regions, and gravel and sand loading. Jobsite clean-up is another function the forklift bucket does well. The various applications the bucket could complete saves the business much money and time for the reason that it does have to entirely switch tools or machines and this can help prevent running into overtime.
