

Remanufactured Lift Truck Parts

Remanufactured Forklift Parts - Lift trucks are very expensive pieces of machines. A 5000lb new electric unit can cost between \$18,000 to \$25,000 and a few thousands of dollars more would be needed for a battery and a battery charger. A similar internal combustion lift truck of similar lift capacity will cost slightly less and the diesel models that are capable of heavier lifting capacities can cost upwards of one hundred thousand dollars. Reconditioned forklifts are an option to be able to save much money as they cost less than half the price of brand new models.

Some people think they would handle more maintenance issues if they buy a reconditioned forklift and are skeptical of purchasing a second-hand forklift at a sale price. A correctly reconditioned lift truck will operate just in addition to a new one and whatever doubts of repairs are unfounded. Even if your lift will get heavy use, so long as you take good care of the machinery, it would serve all your requirements and probably save you a lot of money.

It is important to determine what the seller means by a reconditioned or refurbished forklift when thinking about obtaining a second-hand lift truck. A lot of companies do a really good job reconditioning a unit before selling it. This consists of disassembling the forklift, rebuilding the engine, sandblasting the lift and afterward reassembling the whole thing and finishing with a fresh coat of paint.

To meticulously reconstruct a lift truck engine, a good company will initially entirely disassemble it. A heat cleaning system is then utilized to clean all of the components. As soon as this step has been finished, all of the parts are checked to see if they have any breakage, any extensive wear or any defects. Specific parts like for instance cylinder blocks, connecting blocks, cylinder heads and crankshafts are reground, resurfaced and resized if considered necessary. Several components like gears, nuts, bolts and so on. are repaired or replaced as considered necessary.

The engine is rebuilt by hand as soon as the overhaul has been completed. After putting it back together, a series of tests are applied to the working machine. This is done in order to check all of the components to ensure there are no issues or leaks. If any problems occur, the necessary adjustments are made.

There is no reason to be apprehensive about buying reconditioned forklifts from quality sellers. The process the equipments go through to be rebuilt guarantees the utmost reliability. Repairs costs can really work out to be less as you would avoid the initial phase of higher repairs projections which a new forklift has as it is broken in. By following routine maintenance schedules and taking care of the equipment properly, a reconditioned forklift would serve you well.
